Atlas For Selecting Models

Shandong Dofun Refrigeration Technology Co Ltd

Product introduction

The solenoid valve is a kind of stop valve which depends on the electromagnetic force to switch automatically. In the industrial refrigeration device, the solenoid valve is often used as the remote control stop valve, the regulation mechanism of the two position regulation system or the safety protection equipment. It can be applied to all kinds of gas, liquid refrigerant and other media.

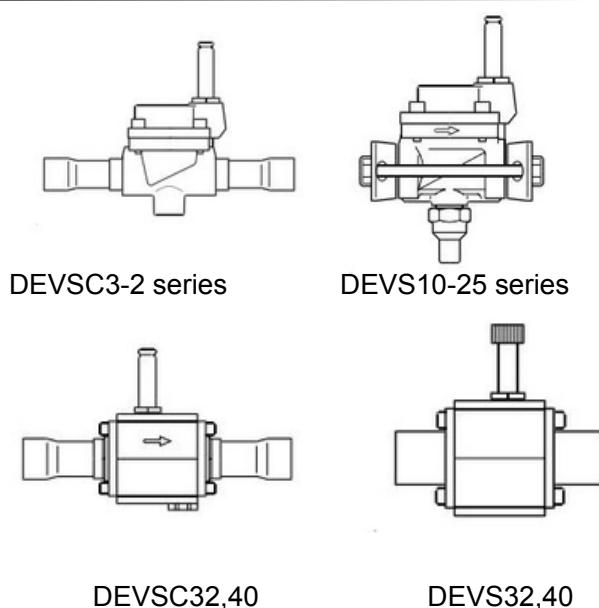

DN3-DN40 R12 , R22 , R502 ,
R134a,R404a,R507,R717

Applicable media: R12, R22, R502, R134a,

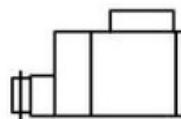

R404A,R507,R717and other refrigerants.

-40°C~+105°C

Applicable temperature: - 40 °C ~ + 105 °C

Electromagnetic coil and Maximum opening differential pressure

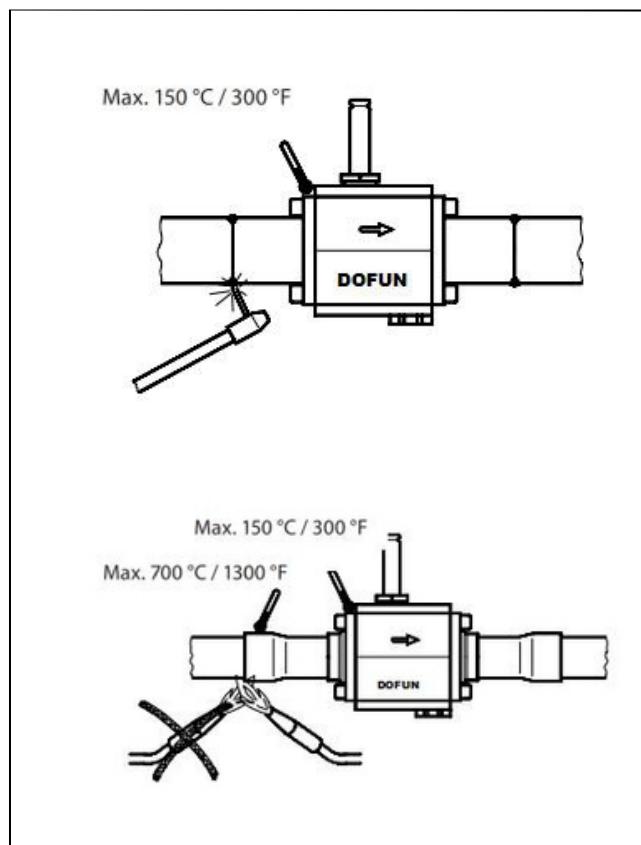

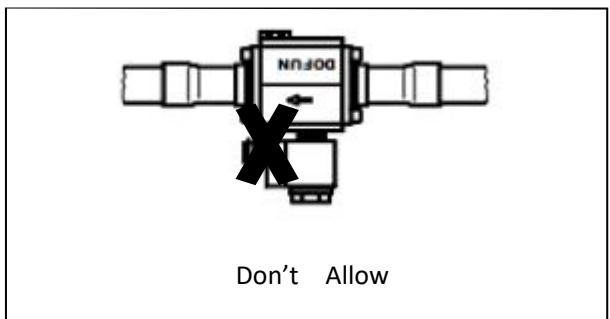

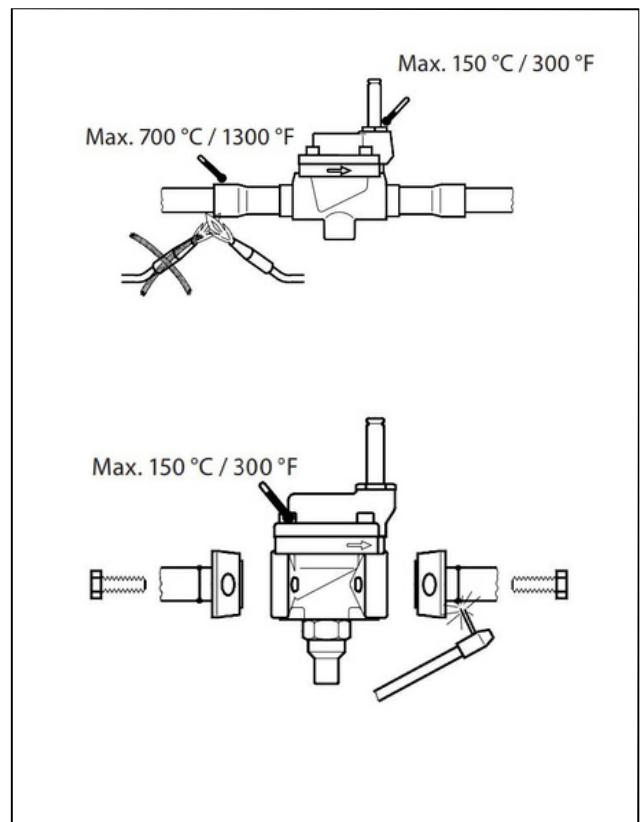

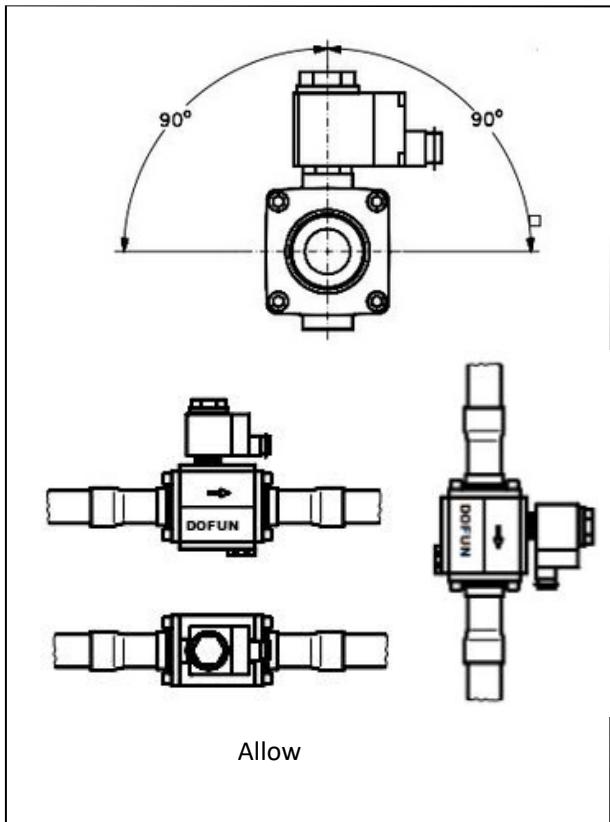

a.c. ~

	DEVSC/DEVS3-25	DEVSC/DEVS32 ,40
ac/10w	Mediapressure	21 bar
ac/12w		25bar

Installation

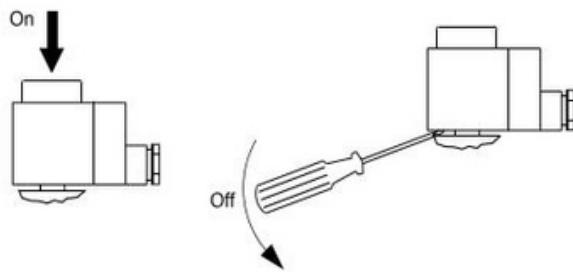

When installing the solenoid valve, the coil shall be in the horizontal or vertical upward state and shall not be installed upside down.

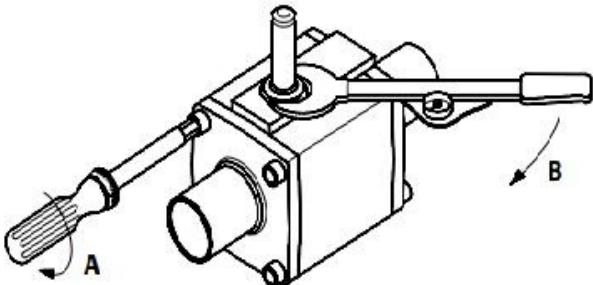

Welding

When connecting to the pipeline, it is necessary to ensure that the temperature generated during the welding of each part shall not be higher than the allowable value, so as to avoid damaging the internal parts of the solenoid valve.

Disassembly and Assembly

Be careful not to turn on the power when the coil is removed. Otherwise, the coil may be damaged and there is a risk of injury and burns.

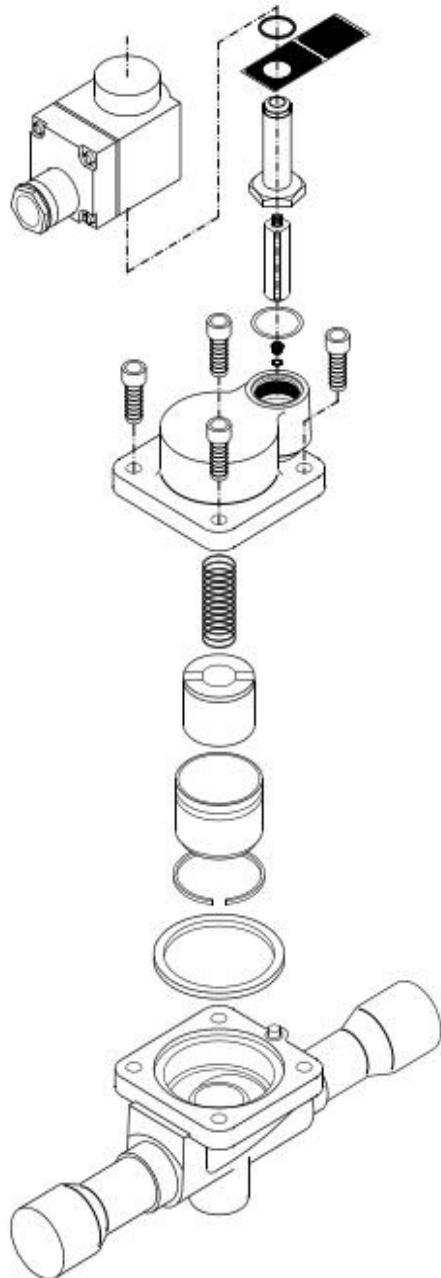

When it is necessary to disassemble the coil and the pilot head, the correct torque shall be followed, which shall not be too large.

The parts that need to be replaced must use the original parts of DOFUN. The solenoid valve must be installed in strict accordance with the requirements of this manual, otherwise the company will not be responsible for the deterioration or damage to the performance of the solenoid valve.
